

Response to Public Consultation: draft GGP on Electricity Grid Connection and Access
Email: Christian Stolzenberger, VGB PowerTech
Date 2 June 2009

Dear Mrs Geitona,

VGB, the association of international technical association for power and heat generation, noticed the ERGEG Public Consultation on "electricity grid connection and access" that is published on the ERGEG webpage.
It seems that there is an overlap between the publishing of the document below and your process (started on 24 March 2009).

VGB submits the following comments on the consultation documents http://www.energy-regulators.eu/portal/page/portal/EER_HOME/EER_CONSULT/OPEN_PUBLIC_CONSULTATIONS/GGP_Electricity_Grid_connection_Access/CD/E08-ENM-09-03_GridConnection-Access_PC_11-Mar-09.pdf:

The European TSO's in continental Europe (UCTE) and EURELECTRIC have agreed with support of VGB on a paper on electricity connection and access last year.
The document was published on 6 April 2009 under the document "Requirements to generating units".
The document can be downloaded <http://www.ucte.org/news/20090406153548/>
It would be excellent if ERGEG could check the agreed document and concludes to agree on this document.

Please, inform me about the upcoming steps of ERGEG.

For further inquiries, I am happy to assist you.

Mit freundlichen Grüßen / With kind regards
Christian Stolzenberger
